**Abstract**

Dow AgroSciences is working to introduce the Enlist™ Weed Control System to help growers meet the challenge of controlling hard-to-control and resistant weeds. Enlist™ is a weed control system composed of new herbicide-tolerant traits and a new herbicide solution. The Enlist Weed Control System will partner with and improve the glyphosate-tolerant system and will provide exceptional weed control in corn, soybeans and cotton.

Enlist Duo™ herbicide with Colex-D™ Technology will be commercialized for use in Enlist crops. Enlist Duo is a proprietary blend of glyphosate and new 2,4-D choline. Colex-D Technology will provide growers key benefits such as ultra low-volatility, minimized potential for physical drift, decreased odor and improved handling characteristics. Dow AgroSciences anticipates regulatory approval of Enlist corn in the next several months. Enlist soybeans will be launched in the 2015 crop year with Enlist cotton following thereafter, pending approvals.

™Enlist, Enlist Duo and Colex-D Technology are trademarks of The Dow Chemical Company (“Dow”) or an affiliated company of Dow. Components of the Enlist Weed Control System have not yet received regulatory approvals; approvals are pending. The information presented here is not an offer for sale. Enlist Duo herbicide is not yet registered for sale or use as a component of the Enlist Weed Control System. Always read and follow label directions. ©2012 Dow AgroSciences LLC
